

DE-MSHORAD

- General Dynamics Land Systems is working with the Rapid Capabilities & Critical Technologies Office (RCCTO) to deliver revolutionary, counter-UAS capability to the U.S. Army using high-energy lasers on a combat vehicle platform.
- Mounted on the newest Stryker A1 chassis, the Stryker DE-MSHORAD system will provide air defense to maneuver forces with the mobility and survivability needed to win in Multi-Domain Operations (MDO).
- The Stryker DE-MSHORAD system will acquire, track and defeat a wide range of aerial threats and will be a component of the Army's integrated air defense network.
- Highlights
 - Integrated two laser weapons systems (LWS) in 2020-21
 - Supported RCCTO's Combat Shoot-off, July 2021
 - Producing three additional prototypes with Raytheon LWS in 2021 & 2022
